PUBLIC PROJECTS

The following projects are available on Github Page.

- 2019 **Excel Formula Parser & Evaluator**
A JavaScript library to parse and evaluate MS Excel/Google Sheets formulas with near 300 formulas support and competitive performance.
- 2019 **Generic Data Collection Tool**
A web app designed for businesses to create data collection forms on the fly and collect data in a short period of time. It provides MS excel like web interface for ease of use.
- 2019 **Xlsx Populate**
A JavaScript library that creates or modifies MS Excel files. It supports real-time formula evaluating and is able to run in the browser.
- 2017 **Connect Four AI**
An implementation of Minimax Algorithm on [Connect Four](#) with GUI.
- 2016 **UofT Timetable**
A timetable Android app for students in University of Toronto. Students can import their timetable from their student account and search course details.
- 2016 **Acorn API**
An Acorn API for University of Toronto. Acorn is UofT's student information service. It has no public API. I wrote this to support the UofT Timetable above.

NOTES

- This resume also available on <https://lesterlyu.github.io/resume.pdf>
- There are some demos on the [portfolio](#).
- UofT Timetable is temporary unpublished from Play Store due to an API change from UofT.
